

Sparking breakthroughs & igniting innovation in Washington, DC

JLABS @ Washington, DC opens in 2021 in collaboration with our partners at Children's National Hospital and the Biomedical Advanced Research and Development Authority (BARDA), a component of the Office of the Assistant Secretary for Preparedness and Response in the U.S. Department of Health and Human Services, to support innovation for our babies, children, and communities. Our 32,000-square foot facility on the Children's National Research & Innovation Campus at the historic Walter Reed Army Medical Center site will be open to biotech, medical device, consumer and health technology start-ups aiming to develop new medicines, medical devices, precision diagnostics and health tech.

Access to a rich ecosystem

Proximity to federal research institutions and agencies, universities, academic research centers and their talent.

Connections that count

Access our exclusive mentorship program and Investor Hub to help get your ideas off the ground.

Big resources for small companies

From lab equipment to supplies and services, our expansive Resource Hub has got your back.

A no-strings-attached model

Leverage our expertise but retain your intellectual property and decision-making freedom.

Johnson & Johnson INNOVATION JLABS

JPALS

JPALS provide resident companies with a forum to explore potential areas of partnership within Johnson & Johnson, as well as mentorship, coaching and contacts to support their growth.

Johnson & Johnson INNOVATION JLABS

INVESTOR HUB

The JLABS Investor Hub, powered by JJDC, brings local and regional investors on-site, at regular intervals, to meet with portfolio companies for investment consideration, mentorship and relationship building.

JLABS Partnerships

Start-ups will have the opportunity to collaborate and work alongside Children's National Research Institute (childrensnational.org/research-and-education/about-cni) to advance innovations for our youngest patients. As part of this new facility, JLABS is also collaborating with BARDA to develop and maintain a specialized innovation unit called BLUE KNIGHT™, that will be dedicated to the advancement of medical countermeasures aimed at securing our nation from chemical, biological, radiological and nuclear (CBRN) threats, as well as from pandemic influenza and emerging infectious diseases.
